Cassegrain Antennas

FEATURES:

❖ Low VSWR
❖ Aluminum or Fiberglass Construction
❖ Low Loss Performance at Millimeter Wave Frequencies
❖ Available from 2Ghz to 140Ghz

APPLICATIONS:

❖ Radar and Satellite Tracking
❖ Communication Systems

DESCRIPTION:

Cernexwave’s CCG series cassegrain antenna consists of a parabolic reflector, a primary feed, a subreflector, and a feed support assembly of four low profile aluminum spars that are attached to the rim and the reflector to position the feed. The CCG cassegrain antenna feature a precision aluminum main reflector that provides excellent performance at millimeter wave frequencies between 18 to 140 GHz. The CCGI series antennas feature metallized fiberglass reflectors and are available from 12.4 to 140 GHz. They offer very high performance in a lightweight antenna structure. These antennas are available in effective diameters of 10 to 120 inches. Because of the low surface tolerance (typically 0.0025 inch RMS) they provide excellent high frequency radiation characteristics.

NOTE: Contact the factory for more details.

HOW TO ORDER:

Specify Model Number

CCG – WG LF HF GN – XX

WG: Waveguide
LF: Low End Frequency
HF: High End Frequency
GN: Gain
XX: To be specified by the factory

Example: To order WR-15 cassegrain antenna with a frequency from 50 to 75Ghz, and 35dbi gain, specify CCG15G50-75-35-XX.
